

# Call Diversion from the UK

## Free UK call diversion

UK Divert provides local rate and national rate UK numbers that divert calls from the UK to overseas destinations. Calls to these UK numbers are charged at either the local rate (5p per minute) or national rate (10p per minute) depending on the call divert destination that you choose.

## UK National Rate and Local Rate Numbers

UK Divert provides the widest range of non geographic numbers for UK customers. Choose from national rate 0870 numbers or local rate 0844 numbers. Numbers can be used as the public number for your business, avoiding number changes when you move premises, or for marketing purposes, to test and track marketing campaigns.

## Unlimited free call forwarding

By subscribing for a UK Divert telephone number, calls are forwarded to your phone line for free. You only pay the monthly rental charge for your number (from just £7.95). Your caller pays either the local call rate or the national call rate and we pay for the call to be diverted to your overseas landline.

There is no limit on the number or duration of diverted calls that you receive each month. By subscribing for a UK Divert number, you receive unlimited call forwarding to your overseas destination.

## UK virtual mobile numbers

In addition to providing local rate and national rate numbers for overseas call diversion, we also supply UK virtual mobile numbers that divert UK calls to mobile phones in over 150 countries. As with our landline service, calls are diverted from the UK to your mobile phone for free. Your caller pays 35p per minute to call your virtual UK mobile number and we pay for the call to be forwarded to your real mobile number overseas.

- Global Coverage - UK call forwarding to 151 countries around the world.
- Free Roaming - No more roaming charges on your mobile. Get a local sim when overseas and we'll issue a UK Mobile number for it to receive your calls locally.
- Lowest Rates - Callers pay as little as 5p per minute to call your overseas phone.
- Exceptional Quality - All calls routed over the traditional telephone network. UK Divert does not divert calls using VoIP, so call quality remains unsurpassed.
