

## Virtual Mobile Numbers

A virtual mobile number is a UK telephone number, with a similar numbering protocol as used for the mobile phone networks. Typically, a virtual mobile number that we will issue you with will be in the format 07023 xxxxxx. When someone calls your virtual mobile number, we divert the call to your own real mobile number, at no cost to you. The caller pays 35p per minute to call you, but you pay nothing to have the call diverted.

The advantages of using a virtual mobile number are:

- Change your mobile number without having to change the number that people use to call you
- No need to disclose your real mobile number to people - you can change your virtual mobile number whenever you wish.
- Your virtual mobile number will divert to mobile phones overseas. When travelling overseas, just pop a local SIM card into your phone and we will divert all of your calls to your overseas mobile number at no cost to you. Avoid roaming charges.

A virtual mobile number is free to setup and costs just £9.95 to rent each month.
