

Landline Services

UK Divert was the first company to offer free international call diversion and remains the leader and the only company to offer an unqualified satisfaction guarantee.

International call diversion works by issuing you with either an 0871 (national rate) or 0844 (local rate) number. Whether you receive a national rate or a local rate UK number depends on the country to which you want your UK calls diverted. Most destinations can use a local rate UK number for their service.

When callers in the UK call your UK number, the call is immediately and transparently diverted to the international number that you have chosen. This gives your business a UK presence at a fraction of the cost of establishing a physical presence in the country. Whether you wish to provide a UK number for sales, customer support, or to establish a general presence in the UK, your UK Divert number makes it easy and inexpensive for callers to get in touch with you with free call diversion.

The advantage to a business of using a UK Divert number for its business are:

- Your company number doesn't change when you move premises. If your physical phone number changes, because of a physical relocation, for example, your public number remains the same and we merely divert the calls to your new number;
- If you move between countries, you can easily and quickly change the destination to which your calls are diverted. So if you spend some time in Spain, but travel to the UK from time to time, your UK Divert number keeps you in touch regardless of your actual location.
- Your company portrays a local presence throughout the UK.

A UK Divert number for international landlines number costs £9.95 a month and comes with our unique service satisfaction guarantee.
